

1. Chilean data model on Physical Education graduates

Employment, income and training indicators in the private sector in Chile.

Statistics on Physical Education Teacher Education as a diagnostic basis for PRO-PHY-EDU

PRO-PHY-EDU private context study

These indicators make it possible to contextualise the private sector linked to Physical Education, physical activity, health and sport in Chile. The information is used as a diagnostic basis for the design of the PRO-PHY-EDU Business Plan, especially in relation to labour market insertion, income levels, professional development and opportunities for collaboration with companies, clubs, sports centres and organisations in the sector.

Data Source

Career Statistics Search Engine from MiFuturo.cl. Portal of the Chilean Ministry of Education, through the Higher Education Information Service, SIES. Search used: generic degree programme Physical Education Teacher Education. Income values expressed in Chilean pesos as of September 2025.

SIES 2025-2026 methodology

The information combines records provided by higher education institutions, tax data cross-checks from the Chilean Internal Revenue Service, and processing/validation by SIES. Income: annualised gross income declared and divided into 12 months to facilitate monthly reading. Employability: proxy indicator of graduates with income equal to or higher than the minimum wage. The report states that it does not work with samples or statistical inferences.
